ABOUT US

CPM is a registered refinery and trusted supplier to jewellers across Southern Africa. We refine precious metals from sweeps, filings, sludge, and X-ray material, and produce 999 silver for alloying and use.

Based in Cape Town, our Manufacturing Hub houses all production, including our sister company Moon Investments and soon, in-house findings.

We also offer assay services, and a wide range of tools, components, and jewellery essentials. CPM is people-focused, supporting jewellers with expert advice, student sponsorships, and industry training.

As proud members of the Jewellery Council of South Africa, we follow strict responsible sourcing practices.

**“WE GET WHAT’S AT STAKE FOR THE INDUSTRY,
AND WE WANT THE SAME THINGS:
TO PRODUCE AND DELIVER GREAT PRODUCTS,
ON TIME, TO HAPPY CLIENTS.”**

Founded by Sharon Eades as a small silver refining operation, CPM has grown into a full-service partner to manufacturing jewellers. Today, we specialise in refining and recycling jewellers’ waste – including sweeps, filings, polishings, old jewellery and sludge - using modern techniques to ensure maximum recovery and value.

Through our Cape Town Manufacturing Hub, we centralise refining, production and investment minting under one roof, allowing us to better support the jewellery industry with efficient services and high-quality materials.

Our goal is simple: to supply jewellers with reliable refining, trusted expertise, and a comprehensive range of tools, components, castings and essential materials. With a strong focus on relationships, education and industry development, CPM continues to support jewellers across Southern Africa with integrity and experience.

**“WE MAY NOT HAVE THE ANSWER BUT WE’LL FIND IT.
WE MAY NOT HAVE THE TIME BUT WE’LL MAKE IT”**

CLASPS

BOLT RINGS

Bolt rings are finished ready for fitting.

Available in 9ct, Sterling & 18ct.

*Also available in 9ct Red.

XU Range - Lightweight are supplied unplated. Available in 9ct.

CODE	UF600XU	UF601XU	UF602XU	UF601*	UF602	UF603*	UF604	UF605
DIAMETER (MM)	4.50	5.00	5.50	5.00	5.50	6.00	7.00	8.00

TIPS:

- The design must lend itself to soldering.
- The parts to be soldered must fit closely and accurately.
- The correct solder and flux must be used.
- The flame should be kept constantly on the move over the whole joint area.
- The joint areas must be free from dirt or grease and ideally cleaned with a file or emery paper.
- Flux should be applied to the joint area and solder prior to heating.

TECHNIQUES:

- Pre-placement: Small pieces of solder are placed at the joint seam prior to heating.
- Heat is then applied until the solder flows to the joint.
- Feeding: The fluxed joint is heated to temperature and the solder is placed into the joint with a soldering pik.

NEED ADVICE?

Cape Precious Metals is committed to assisting our customers throughout the creative process. If you have questions about any of our products, or queries about working with any of our precious metals please don't hesitate to contact your local CPM branch.

WIRE, TUBING & PLATE

TUBING

NB: Tubing is not annealed

TYPE	CODE	OUTER DIAMETER (MM)	WALL THICKNESS (MM)	LENGTH (CM)	GRAMS (G)
STERLING SILVER FULL ROUND RODS	ST	2.00	0.55	30.00	+ - 6.00
		3.00	0.50		+ - 10.00

Special made-to-order Tubing: Please allow up to 4 weeks for delivery.

Clients to fill in special order form when placing special orders, and note that minimum orders may apply.

LAB GROWN DIAMONDS

A SPARKLING INNOVATION

THE FUTURE OF DIAMONDS

Lab-grown diamonds are created using advanced technology in laboratories that mimic natural processes in high-pressure, high-temperature chambers or via chemical vapour deposition, resulting in genuine, high-quality gems. Lab-grown diamonds have the identical chemical composition, optical brilliance and physical durability as natural diamonds, with ethical and environmental benefits.

GRADING LAB-GROWN DIAMONDS

Lab-grown diamonds undergo rigorous evaluation. They are graded and certified by gemological institutes using the same criteria as natural diamonds: the 4 Cs (carat, colour, clarity, and cut). Each diamond has a unique serial number engraved on its girdle and receives an official certification for authenticity and value.

THE SUSTAINABLE CHOICE

Lab-grown diamonds offer a minimising environmental impact compared to natural diamonds. They require less energy and water to produce, do not involve mining, and are free from ethical concerns such as human rights abuses or conflicts related to diamond mining. Lab-grown diamonds provide a responsible and beautiful alternative to traditionally mined diamonds.

LAB DIAMONDS OUTSHINE NATURAL PRICES

Lab-grown diamonds allow customers to purchase larger and higher-quality gems for less. Advanced technology and efficient production processes reduce prices, making high-quality diamonds accessible to more customers. Now they can enjoy superior brilliance and size without compromising their budget.

Teomim Lab Diamonds has partnered with Cape Precious Metals to offer their clients digital access to buying lab-grown diamonds on Labtradr. Labtradr is an e-commerce online and mobile portal where you can search and view our extensive stock, place orders, receive detailed invoices, and get real-time order updates.

For more information and how to get signed up, contact your CPM Sales Representative or contact Teomim Lab Diamonds directly.
